EMENTA DO CURSO

FortiDDoS Administrator v7.2

Código: **EDU-FTN-FORTIDDOS** Categoria: **Fortinet**

InLearn

PÚBLICO

Security professionals involved in the day-to-day administration, management, and troubleshooting of FortiDDoS-F Series devices should attend this course.

PRÉ-REQUISITOS

You should have a basic understanding of DDoS attacks and common DDoS mitigation solutions.

VISÃO

In this course, you will learn how to establish network baseline data and identify, analyze, and mitigate both individual and distributed DDoS attacks while maintaining service availability and network performance. This course covers the fundamental administration and operational concepts of FortiDDoS, providing a solid understanding of how to deploy, configure, and manage FortiDDoS solutions in your network environment.

CONTEÚDO

Introduction and Deployment
Initial Configuration
Monitoring and Reporting
Global Settings
Service Protection

After completing this course, you will be able to:

Train your FortiDDoS to recognize your unique network patterns
Choose the correct FortiDDoS model
Defend against both volumetric and mechanistic DDoS attacks
Deploy FortiDDoS to protect both network appliances and servers
Identify when to use detection and prevention modes
Implement bypass or a high availability FortiDDoS cluster for maximum service uptime
Detect connections from proxies
Describe how the blocking periods and penalty factors intelligently determine which packets are dropped after an attack is detected
Configure access control lists and blocklists
Mitigate anomalies and SYN floods
Describe the main characteristics of protection policies
Characterize different types of attacks by using logs and statistics graphs
Troubleshoot incorrect threshold levels
